

ABC Robotics

Beginners English:

At **Ytek** we aim to provide a variety of learning opportunities for the young learner. We see our programs as tools helping the learner not only reach the goals of the Ministry of Education but expand and play with the language as well. We have designed a unique and exciting program incorporating the newest of robots. The learners learn English in addition to the basics of programming. Our programs are offered as part of the daily school curriculum and/or after school activities from K10-.

We put a great emphasis on spoken English no matter what foreign language ability the child possesses.

Here is one example of the many programs we offer:

Units 6-1: Learning the ABC & Numbers

Pre-foundation learners will be introduced to:

- English Hebrew cognates.
- Sounds, names and shapes of the letters of the ABC.
- Form letters and learn their correct direction.
- Being able to produce letters upon hearing their sound and/or name.
- Read and understand the lexical items they have learnt: Letter combinations and basic sentences.
- Robotics: Utilize robotics for the learning of language.

We believe that with the correct teaching technique all children can learn English. Therefore, all our programs are adapted to the specific needs of each and every group of children. Our teachers and lesson plans are continually updated in order to keep up with the newest technologies and latest innovations. At Ytek we go to great lengths to ensure that no child is left behind.
